

# British Nuclear Group

## USING THE XMU+ TO COMMUNICATE WITH 14,000 STAFF

### Overview

The Interalia XMU+ provides a cost effective and reliable means for the British Nuclear Group to communicate with its workforce of 14,000 at Sellafield, one of the largest nuclear sites in Britain.

### Problem

British Nuclear needed an inexpensive and efficient way to quickly and easily communicate with several thousand people at their Sellafield Nuclear Site in Cumbria, Britain. The solution would provide day-to-day information and emergency announcements.

### Solution

Used in conjunction with 3000 pagers, carried by onsite staff, the Interalia XMU+ provides a cost effective and reliable means for the British Nuclear Group to communicate with its workforce at Sellafield. Whether it is informing the thousands of workers about traffic problems on the road leading to and from the site, or giving early details of an emergency, Interalia's XMU+ is the first line of communication for the site.

At Sellafield the XMU+ is equipped with 61 ports that are used exclusively for ACD announcements. With it managers can quickly and easily change announcements, sometimes up to five times a day, so that employees only receive the most up-to-date information. The XMU+ enables The British Nuclear Group to provide staff with a variety of messages without requiring an expensive dedicated port for each message.

*"We are really pleased with the XMU+ which has provided us with a inexpensive way of communicating with several thousand people quickly and easily", says Michael Woolaghan, Site Shift Manager for British Nuclear Group at Sellafield. "We record a message and within 30 seconds are able to page all staff members to go and listen to it at one of the hundreds of telephones located around the site."*

### Benefits

The Interalia XMU+ enables the British Nuclear Group to easily and inexpensively communicate with their 14,000 staff at the Sellafield Nuclear Site. It also allows Staff to easily update messages as frequently as required so employees are always up to date on potential situations.

### British Nuclear Group

Owned by the NDA (Nuclear Decommissioning Authority) the Sellafield site is managed, under contract, by the British Nuclear Group. It employs around 14,000 people and specializes in nuclear site management and nuclear clean up.
