

## Priority Announcements

### FIRST THINGS FIRST

Make sure your most important announcements are heard first. The SBX<sub>2</sub> Priority Announcements application interfaces with your existing public address announcement system (PAAS) to help you prioritize your overhead announcements quickly and easily.

### CLARITY WHEN YOU NEED IT

#### **Always Consistent**

The SBX<sub>2</sub> Priority Announcements application offers a simple way to deliver clear, calm, and consistent announcements over your public address system. In a hospital, for example, you could program the SBX<sub>2</sub> to announce a Code Blue, eliminating the potential for a panicked communication.

*Applications: Deliver calm messaging in emergencies, maximize listener comprehension.*

#### **100% Emergency Compliant**

Emergency communications are often the highest priority announcements in a system. Make sure that yours are set and ready to play with the 100% emergency planning compliant SBX<sub>2</sub> Priority Announcements application.

*Applications: Deliver instructions during emergencies.*

#### **Wide-Ranging Broadcasts**

Large building? Set your announcements to play across multiple rooms, in multiple zones, or even in multiple languages. The SBX<sub>2</sub> is easy to tailor to your needs.

*Applications: Reach a larger area and audience, improve reach during emergencies.*

#### **Easy to Use**

Once the SBX<sub>2</sub> Priority Announcements app is hooked up to your PAAS node, you're ready to go! Set, reprioritize, or edit your announcements at any time.

*Applications: Update announcements on the fly, make changes without tech assistance.*

### APPLICATION REQUIREMENTS

The application requirements are connectivity to a Paging System.
