

# Message Manager

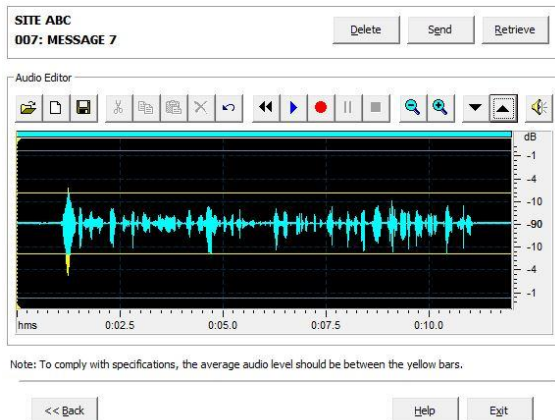

## MANAGE MESSAGES ON MULTIPLE XMU+ OR SBX SYSTEMS RIGHT FROM YOUR DESKTOP

Now XMU+ and SBX users can easily manage their messages on multiple systems directly from their desktop without a dedicated telephone line. Interavia has taken the power of remote telephone access and created a simplified message management tool that enables even non-technical staff to easily record, delete or play messages remotely from their desktop.

The Message Manager has a simple GUI interface and sound editing software making it easy to cut, copy, paste or edit audio files, change message audio volumes, label messages for easy identification and even turn messages on/off from any desktop.

## MESSAGE MANAGER BENEFITS

- Simple GUI interface for non-technical staff to easily administer messages for any XMU+ or SBX2 on the network.
- Password protection ensures messages are only updated by authorized personnel.
- Easily Record, Delete, Play or turn messages on/off from the desktop.
- Cut, Copy, Paste or Edit audio files.
- Increase or decrease audio volumes.

## Message Manager Specifications

**P/N: 14060**

### Configuration

- XMU+ or SBX with a fixed IP address (Note: Message Manager will not work with older XMU systems)

### Software Requirements

- Windows 7, 8, 10

### Hardware Requirements

- LAN connection on the PC
- LAN connection on the XMU+ or SBX2
- Sound card

Delivering Messages: Simply. Clearly. Reliably.

# Message Manager

## MESSAGE MANAGER BENEFITS

- Multiple departments can share the same XMU+ or SBX, because passwords ensure staff only have access to their specific department's messages

- Download professional recordings directly to the XMU+ or SBX, and have the software automatically convert the files to the proper attachment format.
- Record messages with your PC microphone then have the software automatically create the message in the right format.
- An integrated sound package is included so there is no need to purchase a separate software package for editing messages.
- Easily archive or retrieve messages from any XMU+ or SBX on the network.
- Label messages for easy identification when updating multiple messages.
- Pre-record messages in advance using the offline feature then update the XMU+ or SBX at a later date.
